

LM9/st - HOT FEEDER WINDER

The **LM9/ST** is a new step of Martex in its winding technology.

Developed for all the users that, after the winding process, need to steam their yarns.

Thanks to the **HOT FEEDER** the **LM9/ST** fix the yarn during the winding process avoid the steaming process.

Designed for the needs of synthetic yarn makers (polyester, PP and acrylic yarn) to reduce their production costs, the LM9/ST can be used also like a standard winder to wind big and medium thick yarns in general for the production of packages both for dyeing and weaving as well as for rewinding operations.

- Individual control of winding speed by frequency inverter.
- Electronic length measuring system per position
- Magnetic full package stop per spindle
- Electronic tension control
- Hot feeder with programmable temperature up to 240° C.
